South Dakota Weekly Crop Weather Report

Released: February 27, 2012 -- 3:00 p.m. CST For Week Ending February 26, 2012 SD-CW6109 Volume 61 Issue 09

National Agricultural Statistics Service
South Dakota Field Office
P.O. Box 5068
Sioux Falls, SD 57117-5068
Cooperating with:
SOUTH DAKOTA STATE UNIVERSITY
AGRICULTURAL EXTENSION SERVICE and
U.S. DEPARTMENT OF AGRICULTURE
FARM SERVICE AGENCY

AGRICULTURAL SUMMARY

South Dakota saw its first snow storm of the season the last full week of February, leaving an average snow depth of 2.3 inches for the state. Most areas of the state are still enjoying an open winter making it easy on the livestock but the recent moisture was gladly welcomed. Major activities last month included; caring for livestock, starting of calving and lambing, purchasing fertilizer and chemical, and preparing for spring.

This report was based on information from regional extension educators, Farm Service Agency county directors, and other reporters across the state.

WEATHER INFORMATION

Most of the month continued the winter trend of warmer than average conditions. The precipitation pattern did become more active with a few precipitation events crossing the state dropping isolated heavier amount of precipitation, according to the State Climate Office of South Dakota.

Statewide temperatures continued above average overall with the warmest areas compared to average in the northeast. Statewide temperatures were in the 20° 's F. A few stations around the Black Hills were a few degrees below average. Areas of the northeast were $6\text{-}7^{\circ}$ F above average. Oelrichs had the highest daily high at 58° F; Philip had the lowest temperature at -15° F.

A mid-month storm dropped heavier snowfalls from north central to southeast parts of the state. Thus, these areas were above average for the month. Areas of the northeast and much of the west were below average missing most of the events. Several locations received more than an inch of precipitation for the month. The highest total was at Wessington Springs at 1.21 inches. The dry areas of the northwest and northeast had the lowest precipitation totals, the lowest total being 0.12 of an inch at Newell. Snow cover did exist over parts of the state left over from recent snow events. The US Drought Monitor did increase coverage of D1 (Moderate Drought) and D2 (Severe Drought) in the eastern third of the state.

SOIL CONDITION

Soil temperatures inched up to close to or slightly above freezing everywhere in the state. Aberdeen had the low 4 inch soil temperature at 29° F; Oacoma was the warmest at 33° F.

FIELD CROPS REPORT

With the arrival of the first snow storm of the season, snow cover conditions improved but some still worry about the quality and survival rate of the alfalfa and winter wheat for the state. Winter wheat condition is rated at 31 percent poor, 40 percent fair, and 29 percent in the good to excellent range. Snow cover for winter wheat is rated at 71 percent poor with the remaining 29 percent adequate, compared to last month rated at 87 percent poor and 13 percent adequate. Alfalfa snow cover is rated at 71 percent poor, 28 percent adequate, and 1 percent excellent, compared to last month's ratings of 83 percent poor and 17 percent adequate.

LIVESTOCK, PASTURE, AND RANGE REPORT

As some areas of the state started calving and lambing in February, conditions could not be much better with mild temperatures and minimal snow coverage. Feed and water supplies are mostly adequate due to the open winter allowing livestock to be pastured most of the season. Cattle are rated 93 percent in good to excellent condition. Cattle deaths are rated at 1 percent above average, 63 percent average and 36 percent below average for the month and newborn calf deaths are rated at 4 percent above average, 70 percent average and 26 percent below average for February. Calving was at 9 percent complete as of February 26th. Sheep are rated 95 percent in good to excellent condition; with sheep and lamb deaths rated at 78 percent average and 22 percent below average. Lambing was at 22 percent complete as of February 26th. Stock water supplies are 95 percent adequate to surplus and feed supplies are 99 percent adequate to surplus, both ahead of the 5-year averages of 81 and 85 percent, respectively. Feed and water supplies accessibility both rate at 98 percent readily available.

Average Soil Temperatures Week Ending February 26, 2012 (4-inch Depth)
